7208

1

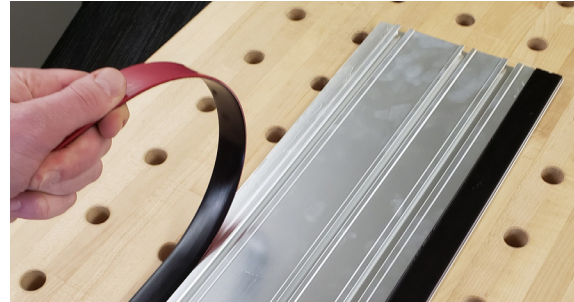

Remove rail end caps.

2

Clamp guide rail to work surface with Guide Strip hanging over edge. Apply strong downward pressure on corner of Guide Strip to break free.

3

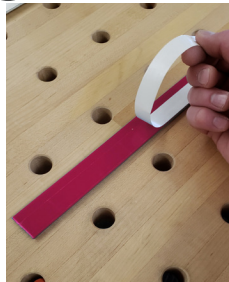

Flip guide rail over and remove guide strip. The guide strip is attached with strong adhesive but is able to be removed.

4

Using a shop cloth, remove excess glue residue with common adhesive removal product.

5

Remove the protective backing from replacement guide strip.

6

With adhesive side facing main track body, align end of guide strip with end of track and fit into groove. Once positioned correctly, firmly press into set.
